
Our Company

We are a combination technical product sales and service plus engineering design company specializing in IT related infrastructure. Our in-house engineering capability allows us to provide complete solutions and technical advice for optimal equipment selection, application, use and servicing. Our motto is “*Providing Results through Engineering and Products*” and it truly describes our methods. We know proper engineering is critical along with quality equipment. Bringing both together provides assured quality results. We’re not flashy, we’re technically sound. Please visit our website for additional up to date information

Major Associated Products / Manufacturers

Electrical

UPS – Powervar, Toshiba

UPS Bypass Panels – C&C Power, Kinney

Battery Health Monitoring Systems - BTECH

Battery Replacements – C&D, East Penn, EnerSys, Yuasa

Power Conditioning - Power Distribution, Inc., Powervar

Cabinet Power – Geist, Server Technology

Static Switches – Power Distribution, Inc., Twin Power

Telecom Power – 48 VDC Power Systems – C&C Power

Service – Wilson Engineered Systems

Technical Furniture

Data Center / NOC Command Bridges – e-Systems

Server Cabinets / Rack Enclosures – e-Systems

Technical Work Stations – e-Systems

Monitoring Systems combining traditional digital and analog monitoring with modbus, snmp and web hosted monitoring for Data Centers, Building Automation, Graphic Annunciation, Generator status, Water Detection, etc..... – RLE Technologies

Management Aids (developed by Wilson Engineered Systems)

Device Tree – interactive database documenting IT and building electrical power systems to easily know effects downstream when a breaker is off and to identify upstream breakers when a load is off

docuMOP – web based service for technical documentation and procedures

Engineering Design for Data Centers, Generators, UPS, Power Distribution, HVAC, Monitoring Systems, etc..... is done in house. FL Certificate of Authorization #27783, Professional Engineer License #41265
